

building your systems

PRESENTATION

WHO ARE WE?

Your partner in the construction and maintenance of your building installations

Our motto is „Always support the customer“. Therefore we strive to be a loyal partner in the design and construction of your electric and communication infrastructure. Our objective is to provide comprehensive construction and continuous maintenance of all types of building power installations and to optimize their parameters so that they operate in an optimal mode.

We employ over 55 professionals, including qualified engineers, designers and contractors. All employees have received specialized training and hold the relevant certificates and their experience in building various types of power installations has been well proven over the years. Through our internal trainings associated with ISO, we strive for continuous improvement of our employees, led by our strong desire to ensure uncompromising service quality.

We work with well selected and widely recognized quality products and our design

team has undergone multiple trainings and is officially certified by their manufacturers, which is why we have been authorized to use the maximum possible warranty for the products. Given our experience in the field of installations we offer an optimized design according to your needs. Our teams involved in systems development and integration, both high voltage and low voltage, have been trained and acquire new skills and knowledge of new technologies upon their recertification on an annual basis. Our system engineers and traders offer comprehensive solutions for all types of electrical installations and their integration. And the final product - the system constructed by us - is measured, certified, covered by warranty and post warranty maintenance by our specialists, who are available seven days a week, 24 hours a day. We believe that this is the only way to achieve high quality and prove our professionalism to you, our clients.

HOW CAN YOU BENEFIT FROM OUR SERVICES?

We build the following installations:

- External power supply of various facilities;
 - Back-up power supply - with diesel generators and UPS-systems;
 - Energy Compensation;
 - Power routes, provided with cables and busbars;
 - High voltage power installations - supply of outlets, engines and equipment;
 - Lighting installations, interior, evacuation, façade and park lighting, with a wide variety of lighting fixtures and modern lighting control solutions;
 - Lightning protection and earthing systems;
 - Supply and installation of main distribution boards, modular, power and control boards;
 - Systems for defrosting of gutters and fountains;
 - Ramp heating systems;
 - Installations for photovoltaic systems.
- We provide comprehensive engineering of security systems, including:
- Fire alarm systems;
 - Alarm systems and perimeter security systems;
 - CCTV systems;
 - Access control;
 - Intercom systems;
 - Public address systems.

In the process of installation development we trust and use tested brands, such as:
